

SUPPORTING YOU WITH THE LATEST TECHNOLOGY

Our Proof of Concept (POC) service aids customers and platform providers to make informed technical and commercial decisions about implementing our technology.

As the leading manufacturer of lightweight gyro-stabilised gimbal systems, it is important to us that our products integrate seamlessly with your specific applications. We understand the risks associated with selecting the right technology partner and making purchasing decisions, so we want to make the process simple and risk free for you.

To do this, a technical consultant will bring the system to you, so you can see all of the benefits of our camera systems before making any purchasing decisions.

The POC service is to successfully demonstrate our products within your environment and applications. The consultant will discuss in advance a list of features and requirements that you wish to address as part of the Proof of Concept. This will include the correct fixtures and vibration mounts required for specific testing. We will liaise with your dedicated technical lead to understand what is fully required of the demonstration in order to reassuringly provide a successful technical outcome for both parties.

COST

The cost of the Proof of Concept service is \$4,950 USD of which 50% is refundable if a UAV Vision gimbal is ordered within 6 months of the on-site demonstration. 100% will be refundable if 3 or more systems are committed to.
